

S197 FORD MUSTANG

KDT928 POSITIVE SHIFT KIT TRANSMISSION MOUNT INSERT

The KDT928 Positive Shift Kit is a proven bang for your buck modification from WHITELINE designed to improve shift engagement during dynamic loads. A simple yet effective bushing that inserts into the factory transmission mount, reducing the compliance of the heavily voided factory mounts.

CHASSIS CONTROL BUSHINGS
LIFETIME WARRANTY!

MSRP \$34.90

PROBLEM SOLVING The factory Ford Mustang transmission mount has heavy voiding that allows for excessive transmission movement. The misalignment of the linkage mechanism causes binding under aggressive shifting and cornering loads. KDT928 fills those voids to reduce the transmission slop for more precise shifting when you need it.

NOTE: Actual production part comes in black.
